

CORE2A - GOVERN LEGAL TRANSFER SPACE

Legal Practice Pool - PRACTICE

Purpose is explicitly bound to PRACTICE for this review fixture. Core2A makes concrete items legal, answer-checked and provenance-safe.

This sample demonstrates:

- Items remain inside the validated capability/transfer boundary.
- Every item has a canonical answer.
- All items are PEDAGOGICALLY_GENERATED; no official source claim.
- Core2B may select only legal IDs and only below its supplied ceiling.

Sample topic

A point on an axis equidistant from two fixed points

Generated review fixture - not an official exam source

1. Legal pool

Internal demand labels are shown here for review; they need not appear to the learner.

EQ-D1 M0_DIRECT

P on x-axis, $A=(-2,3)$, $B=(4,3)$. Find P.

Answer contract: $P=(1,0)$. | PEDAGOGICALLY_GENERATED

EQ-R1 M2_REPRESENTATION_TRANSFER

A diagram gives $A=(-1,4)$, $B=(7,2)$, P on x-axis. Model and solve.

Answer contract: $P=(9/4,0)$. | PEDAGOGICALLY_GENERATED

EQ-I1 M3_INVERSE_TARGET

$P=(3,0)$ is equidistant from $A=(1,4)$ and $B=(k,2)$. Find k.

Answer contract: $k=-1$ or 7 . | PEDAGOGICALLY_GENERATED

EQ-H1 M4_HIDDEN_STRUCTURE

Interpret $(x+3)^2+16=(x-5)^2+4$ geometrically and solve.

Answer contract: $P=(1/4,0)$. | PEDAGOGICALLY_GENERATED

EQ-M1 M5_METHOD_DISCRIMINATION

$A=(1,5)$, $B=(9,5)$, P on x-axis. Choose the efficient method and solve.

Answer contract: $P=(5,0)$; symmetry is efficient. | PEDAGOGICALLY_GENERATED

EQ-F1 M6_FAMILY_DISCRIMINATION

A gate on $y=0$ must be equally far from $A=(2,4)$, $B=(8,4)$. Choose the model and solve.

Answer contract: $P=(5,0)$. | PEDAGOGICALLY_GENERATED
