

Where this question came from

NCERT Class IX Science Exemplar - Unit 2, Q15(c). Source lane: SOURCE_CORE2.

TRY IT FIRST

What would you observe when a mixture of iron filings and sulphur powder is heated strongly?

Working area:

Clues - use only if stuck

- Small clue: write only what is observed or tested before naming the substance or product.
- Bigger clue: keep evidence and inference in separate lines.
- How do I start? Draw two columns: observation/test | inference.

QUICK CHECK

A new substance, iron sulphide, is formed.

- Strong heating causes iron and sulphur to react.
- A new substance, iron sulphide, is formed.

FULL WORKING

- Write the stated observation or process before interpreting it.
- State the chemical inference separately.
- Check that the inference is supported by the source evidence.
- Final answer: a new substance, iron sulphide, is formed.

Check your chemistry

Check that the answer follows from the chemical representation and evidence, not from a surface cue. Do not add an extra condition or exception that the source question did not give.
